

**Levetiracetam** measurements are used in monitoring levels of **Levetiracetam** to help ensure appropriate therapy.

**METHOD: ENZYMATIC (Glucose-6-phosphate dehydrogenase)**

**FEATURES:**

FOR THE QUANTITATIVE MEASUREMENT OF LEVETIRACETAM

# Levetiracetam

Levetiracetam (Keppra®) is an anticonvulsant medication used to treat epilepsy and is used as adjunctive therapy in the treatment of partial onset seizures, myoclonic seizures and primary generalized tonic-clonic seizures.

- ✓ Convenient, liquid-stable, ready to use
- ✓ Tested drugs and endogenous substances do not interfere
- ✓ Nonhazardous preservatives contain no sodium azide
- ✓ Excellent calibration range

**BENEFITS:**

- ✓ Easy to use, no additional preparation required
- ✓ Provides confidence that results are reliable and accurate
- ✓ No special handling required
- ✓ Laboratory flexibility

## Levetiracetam – Intended use

The Levetiracetam assay is a homogeneous enzyme immunoassay for the quantitative determination of Levetiracetam in human serum or plasma, for use on automated clinical chemistry analyzers.
