Calcium

FOR THE QUANTITATIVE MEASUREMENT OF CALCIUM

METHOD: ARSENAZO III; ENDPOINT

Calcium measurements are used as an aid to monitor and diagnose bone and kidney disorders as well as neurological disease and pancreatitis.

The SEKISUI Calcium assay uses an Arsenazo III procedure which is easy to use and applicable to routine laboratory instrumentation. It is intended for the measurement of calcium in serum.

Features

- No significant interference displayed from samples with elevated levels of hemolysis, lipemia or icterus
- One part, stable liquid
- Wide variety of chemistry analyzer applications available

Benefits

- Reduces the need for sample dilutions
- Easy to use, no additional preparation required
- Confidence in results
- Flexible testing, well suited for use with fully automated procedures
